PARAS STEEL
STEEL OF INDIA

ISO:9001

ISO:14001

OHSAS:18001

In good times, anything sells.

In bad times, **nothing** sells but quality.

Trusted by the best

Over the years, Paras has developed an enviable roster of customers in India, as well as a growing export market in Nepal, Bhutan, etc. We are enlisted with numerous Government departments and multinational companies, who recognize the quality of our steel. Noteworthy approvals include Power Grid Corporation for MS angles and Military Engineering Services (MES) for TMT and Structural sections. Many prestigious buildings have been made with our steel.

From the MD's desk

The 21st century has marked good times for the Indian steel industry. Both domestic and international demand has been robust. For producers like Paras, the boom in the infrastructure sector has fuelled demand from the construction industry. Almost all steel companies have done well and we are no exception.

Good times, however, do not last forever. In our quarter century of industry experience we have seen the ferrous cycle rise, fall and rise again. We have learnt that what survives is quality -- and the trust of customers.

It is this trust that is our most precious asset. We seek to sustain it with technology, engineering skills and ethical behaviour.

In the last few years we have consistently invested in building a modern plant and implementing quality systems and processes. Today we use the best steel as raw material, process it with the best equipment, and follow best practices to assure quality products.

I hope you will give us the opportunity to win your trust.

Steel builds infrastructure
Infrastructure builds the **N**ation.

The making of quality

Located in Durgapur*, the industrial hub of West Bengal, Paras Steels is the first automatic plant in Eastern India to produce Thermex TMT bars as well as the full range of structural steels.

It is the only plant in the region to be **certified ISO 9001:2000 for quality processes, ISO 14001:2004 for environment management, and OHSAS 18001 for health and safety standards. The relevant BIS certifications, such as IS 1786:1985 and IS 2062:2006 have also been obtained.**

The modern plant incorporates a complete Thermex treatment system and a structural mill. The complete range of requirements can therefore be met under one roof.

Durgapur being one of India's premier steel hubs, the billets are locally procured from Steel Authority of India . Proximity to other raw materials and markets means that Paras products are competitively priced despite their superior quality.

Applications

Segments

Typical Applications

Construction	Industrial, Hospital, Institutional Buildings, Exhibition Halls, Stadiums, Railway and Bus stations, offshore structures
Agriculture & Rural areas	Machinery, Storage tanks, Grain bins, Bullock Carts, Meeting Halls
Infrastructures	Bridges, Flyovers, Foot Bridges, Culverts and RCC Structures, National Highways, Roads, Airport.
Oil, Gas & Power	Wells, Platforms, Jetty, Nuclear/Thermal/Hydro Power, Wind Mills and items related to power
Transport	Railways, Metro Railways, Sky Bus, Buses, Trucks, Luxury Coaches, Cars
Electrical & Electronics	Transformer core, Motors, Transmission Line Towers, HT TLT, Re Works, Sub stations, Power house, TL Hardwares.

Paras TMT Bars

Paras TMT is the latest generation of ribbed, high strength, thermomechanically treated reinforcement bars that are popular the world over. The company has been the first in Eastern India to introduce the state-of-art Thermex process under licence from HSE, Germany to produce these bars in grades designated as Paras TMT Fe 415 and Paras TMT Fe 500 with different mechanical properties.

The Thermex TMT process features rapid cooling of heated bars' periphery. This transforms the peripheral structure to martensite, which is then annealed through the heat available at the core. The resultant bar structure is of tempered martensite on the outer surface and of fine-grained ferrite-pearlite at the core, imparting high strength, toughness and ductility.

Thermo-mechanically treated (TMT) reinforcement bars are today essential for any serious construction. For load bearing applications they have completely replaced CTD and plain bars on account of their remarkable weight to strength ratio.

◀ All blooms and billets are procured from SAIL
Laboratory testing of samples ▶

► Paras Structurals

Structural steel is steel construction materials, a profile, formed with a specific shape or cross section and certain standards of chemical composition and strength. Structural steel shape, size, composition, strength, storage, etc, is regulated in most industrialized countries. Structural Steels shape structure on mathematical geometry and solely depend on $\angle 90^\circ$.

The structural mill produces a variety of hot rolled products such as angles, channels and beams and joists, as well as flats and rounds of various dimensions. The versatile range includes a cross section of special contours for bridges, buildings, transmission towers, industrial structures as well as for automobile and shipping industries. An online straightening machine ensures accuracy of angles, which is particularly important for transmission towers.

The strength and quality consistency make Paras structural products a favourite among leading engineering and construction companies. All raw materials are sourced from SAIL. Each batch is subjected to stringent tests. Samples from every cast are sent for chemical analysis, tensile and bend tests. Where required, impact and spectromax testing are also undertaken. Finally, piece-by-piece inspection ensures that only flawless pieces are dispatched. When it's Paras, you are sure.
